

# Instructions 4

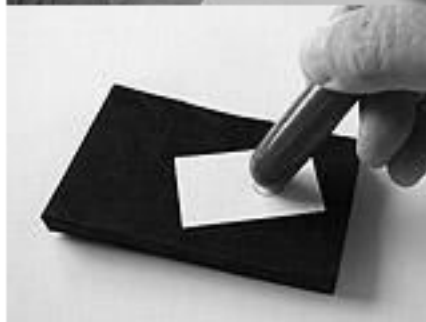

Trouts and Seasons of The Mountain Village Since 1997

Assembling of head part is similar to other cases.  
But if you add eyes and upside of jaw, it become more real.

Insert upside of jaw in the nose's part and attach.  
Put glue on the middle of the reverse side of jaw then.  
Put together the cut point and paste.

Draw the outline of eye to the reverse side of paper.  
To make shape of bowl, use a stick that is roundish at the end and press the paper on rubber board.

Cut out the eye's parts and put glue on its edge.  
Use tweezers to put the eyes.

Completion of the head.  
It looks real because eyes are three dimensional.

Notice  
The caudal fin became 2 pieces but assembling is similar to other cases.  
To insert the caudal fin, cut 8mm (0.35 in.) in the center of the last of body part.
